

CLAIMS

1. A process for producing a compound represented by general formula (2):

wherein R₂ denotes an alkyl group having 1 to 10 carbon atoms or a cycloalkyl group having 3 to 10 carbon atoms; R₃ denotes an organic group; and R₄ denotes a hydrogen atom, a trimethylsilyl group or a triethylsilyl group,

characterized by reacting a compound represented by general formula (1):

wherein R₁ denotes a hydrogen atom, a trimethylsilyl group or a triethylsilyl group; R₂ denotes the same as described above,

with a thiol compound represented by general formula (3):

wherein R_3 denotes the same as described above,

in the presence of a base and optionally eliminating the protective group R_1 .

2. The production process according to claim 1, wherein R_2 is a tert-butyl group.

3. The production process according to claim 1 or 2, wherein R_3 is the thiol residue of a thiol compound represented by formula (4):

4. The production process according to claim 1 or 2, wherein R_3 is the thiol residue of a thiol compound represented by formula (5):
